

1.4-1.6 ton CDD14-CDD16

Operator handle

Ergonomically designed handle for operator comfort and ease of use. Variable speeds available allowing the operator to increase or decrease speeds to suit each varying situations.

Electric power steering system (EPS)

Indirect power assisted steering system which is not connected directly to the drive wheel. This allows for a more direct and precise steering that is lighter than conventional designs.

AC drive motor and Curtis AC controller

High performance AC drive together with a Curtis AC controller maximizes power output.

■ Automatic drive wheel traction compensation system

Centrally located servo cylinder keeps drive wheel traction optimized as loads are increased. This overcomes traction loss caused by the lightening of the drive wheel when the machine is fully loaded.

Multi-function instrument Easy read LCD hour meter and battery discharge indicator (BDI) in one integral unit.

■ Easy change battery side extraction
Side battery extraction allows effortless battery change and access for operator maintenance.

■ Sealed stabilizer wheels

Maintenance free sealed stabilizer wheel units eliminate damage from shrink wrap and banding material, whilst optimizing stability.
